SUMMARY

Billing and onboarding received most of the attention this week. Subscription lifecycle improvements and a streamlined signup flow will help reduce churn and support tickets.

PRIMARY UPDATES

- Subscription upgrade and downgrade flows with prorated billing and confirmation emails.
- New onboarding wizard with progress persistence and optional skip steps.
- Webhook retries and dead-letter queue for failed delivery to external systems.

REPOSITORY DEEP DIVE

meridian/backend (Feature Dev)

Python FastAPI PostgreSQL

- Added subscription change API with proration and idempotency keys.
- Implemented webhook retry worker with exponential backoff and DLQ.

meridian/frontend (Feature Dev)

React TypeScript Vite

- Built onboarding wizard with step state in localStorage and API sync.
- Updated billing settings page with plan comparison and upgrade CTA.

Here is a small poem for this week's updates:

"

Subscriptions rise and fall with grace,

Onboarding finds its pace.

Webhooks retry through the night—

Billing and signup, squared and tight.
